Information about the Influenza Vaccination

It is possible to prevent Influenza and the resulting complications by getting a vaccination against the Influenza virus. As the virus mutates every year, a new vaccine is required.

Therefore, it is very important to get vaccinated with new vaccine every year.

Getting vaccinated will prevent the spread of the virus.

Please read the Influenza vaccination information provided and fill out the questionnaire as thoroughly as possible to ensure your safety.

Generally, side effects are mild and disappear within a couple of days.

Serious side effects are very rare.

Mild side effects:

You may experience; soreness, reddening, swelling, hardening, pain and numbness at the injected spot. You may also experience fever, chills, headaches, tiredness, temporary loss of consciousness, dizziness, swollen lymph nodes, vomiting, nausea, diarrhea, joint or muscle pain.

If these symptoms occur, they usually begin shortly after or within a few days after the injection.

Serious side effects:

Serious side effects are very rare but you may experience;

- 1) Shock, severe allergic reactions like hives, difficulty breathing, also known as an anaphylactic reaction.
- 2) Fever, headaches, seizures, impaired mobility or consciousness, etc within 2 weeks after the injection.
- 3) Numbness in both hands and feet, walking difficulties etc., also known as Guillain –Barre syndrome.
- 4) Convulsions
- 5) Liver failure, jaundice.
- 6) Asthmatic attack

The National Vaccine Injury Compensation Program

If you have suffered an injury or sickness due to the vaccination, you or your family can receive relief services in accordance with the law of Pharmaceutical and Medical Devices Agency (PMDA) act.

(Please see reverse side)

Precaution prior to the Influenza vaccination
